

## **BAGS INFO SHEET**

Regardless of how hardwearing your dive kit is supposed to be, no single piece of equipment has to take as much physical punishment as the humble dive bag. This sleek and competitively-priced model from TUSA is one of the best-designed models on the market today.

The CB2 is very much of the one-bag-for-all-uses school: there's enough capacity for a full set of kit, a good selection of clothes and a washbag (traveller's tip - always stow toiletries in an outer compartment in case your shampoo/shaving foam decides to leak). It may not have a solid shell, but the cumulative padding of the bag is such that it can survive some severe pummelling, and you don't have the extra weight that comes with a hard pack.

Dive Magazine - 01/01/04
